Mirelle

FARM OWNER

Here are a few lines of dialogue from this person, giving you some clues or tips about what to do and so on and so forth. I'm guessing it's three lines or so.

Here is a response option here is a response option.

Layer 1 (bottom layer)

Is 1920x1920 and moves up and down in the viewport/screen vertically as necessary, depending on how the character moves.

This layer should never move up or down past the edge of the viewport.

Paths, dirt, grass, etc. are all navigable. Buildings, trees, fences, NPCs and other objects should be treated as obstacles that the character can't pass through.

Entrances to buildings should all be where the building meets the path.

Layer 2

Players and NPCs are represented by 40x40 px icons.

Player moves using the arrow keys and interacts with NPCs, buildings, etc. by hitting the space bar.

The bottom of the icons should be considered the front of the character, so whichever way they are moving the bottom of the icon should be facing that way.

Most NPCs will have a home that they occupy occasionally.

Layer 3

Vignette.jpg is set to multiply blend mode.

It fills the viewport/screen and does not move.

Layer 4 (Top Layer)

UI, menus, dialog windows, combat windows etc. are on this layer and are fixed in the viewport/screen

.The UI items shown are 50px in from the edges.

Overworld map

The game will be made up of 16 adjacent 1920x1920 quadrants or “scenes”.

NPCs, enemies, etc. cannot travel freely from one scene to another, but may have patterns of movement or behavior within their scene.

The player can move from one scene to the next. When they do so, they should appear in the new scene in a corresponding location. For example, if a player moves from D3 to D2 along a path toward the middle of the scene, they should appear on that same path in the next scene.

A1 SCHOOL OF SORCERY	A2 MOUNTAINS	A3 MOUNTAINS	A4 WIZARDS'S FORTRESS
B1 GRASSLAND	B2 KING'S CASTLE	B3 TOWN	B4 WOODS
C1 VILLAGE	C2 GRASSLAND	C3 WOODS	C4 WOODS
D1 GRASSLAND	D2 VILLAGE	D3 FARM	D4 WOODS
